

ALTERNATES WORKSHOP May 31 & June 1, 2007

Alternative 2: Rehabilitation

Features:

- Major rehabilitation to existing bridge - results in remaining life expectancy of 30-40 years.
- Wider sidewalks on the existing bridge and a separate fishing pier.
- Lighting, archways, and other architectural improvements around the bridge.

Issues:

- Fishing pier, and wider sidewalks provide additional / improved access for some bridge users.
- No significant known right of way or environmental impacts.
- All bridge traffic will still be impacted by frequent drawbridge openings.
- Limited capacity for evacuation and emergency situations.
- Total Cost = \$130 to \$140 Million.
- Total Displacements = 0.
